

Documentation of BOMAG Environmental and Safety policies

For BOMAG, located in Boppard in the heart of the main German tourist area of the Rhine River, European and German legislation on Safety and the Environment are regarded as the minimum standards for all operations and products.

In many cases the latest technology is utilized and “best practice” solutions are used to provide the highest protection to operators and the environment.

A few outstanding examples are as follows:

- Sensor protection for automatic production machines (welding robots, etc)
- Powder coating painting – no VOC emission, no paint waste
- Closed circuit for washing parts
- Integrated waste heat recovery system for factory heating
- Waste management system
- Sound insulated test booths

In our endeavor to maintain the highest quality standards in our products, it is essential to provide the appropriate environmental conditions. Therefore instructions concerning safety and the environment have become part of our certified Quality Management system. Additionally each employee receives an official set of rules and regulations on safety and environmental matters. The company also provides regular training and information to ensure the maximum safety and environmental awareness of its staff.

An internal safety and environmental management system (on the basis of DIN 14001/OSHAS 18001) is in place and is managed by officially appointed and specially trained staff.

Our products incorporate the latest technology in operator safety, environmental protection and working efficiency. At each stage in the design of our products, safety and environmental considerations are uppermost.

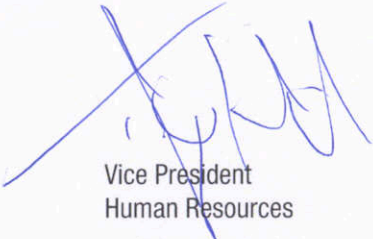

The following features are available on all of our products:

- Safety equipment to the highest world standards
- Engines with fuel economy mode (ECO-Mode)
- Protection against noise/vibration for the operator and surrounding area
- Bio-degradable oil
- Materials used are recyclable

Recognizing this commitment to its employees and the environment, BOMAG undertakes to provide a safe working place with the lowest possible environmental impact from its manufacturing process and products.

Further information is available from our Safety and Environmental officers.

Boppard, September 2010
