BOMAG TELEMATIC.
For higher security, better plant management and greater efficiency.
Efficiency 2.0 –
Your machine is just a mouse click away!

BOMAG has taken efficiency to another level: now you can monitor and manage your fleet with BOMAG TELEMATIC. You will always know where your machines are, how they are being used and when the next service is due. Warnings can be automatically programmed and, of course, all recorded data can be tracked.

- BOMAG TELEMATIC
  A new dimension in security, fleet management and efficiency.
BOMAG TELEMATIC comes in two versions.

**BOMAG TELEMATIC START**
The base package provides the following functions:
- Location tracking
- Geo-Fence (a warning indicates the machine has left a defined area)
- Monitoring standing time (an warning indicates the machine is operating outside of defined times)
- Records operating hours
- Service and maintenance planning

**BOMAG TELEMATIC POWER**
The POWER solution offers the following features additional to those on the basic package:
- Total and average fuel consumption for all time periods
- Utilisation of capacity and efficiency
- Idle running control
- Alarm warnings under key operating conditions (oil pressure, cooling water, ...)

**BOMAG TELEMATIC POWER** is available as an option on self-propelled BOMAG models – and BOMAG TELEMATIC START can even be fitted to other manufacturers’ machines – meaning you can manage mixed fleets.

*Find out more information about the availability of BOMAG TELEMATIC on specific machines from your BOMAG Sales Partner.*
BOMAG TELEMATIC gives you these benefits:

You know where your machine is.
Your machine is always just a mouse click away.
You know exactly where your machine is located.
Long telephone calls are a thing of the past – whether
you're concerned with transport, usage or scheduled
service intervals.

You know if your machine is where it is supposed
to be.
Define virtual geographic areas and assign them
to specific machines. If the machine leaves that
area an alarm warning will be sent via e-mail. This
simplifies the tracking of machines and offers
additional security. The system detects the threat of
theft in real time.

You know if the machine is being used without
authorisation.
Define time periods when the machine should not
be operated. If the machine moves or is operated an
alarm warning is sent via e-mail.
BOMAG TELEMATIC supports cost control.

Operating hours
can now be assigned to specific periods, sites or an individual hirer.

The POWER version
even allows fuel costs to be assigned. A comparison of refuelling data can reveal the theft of fuel.

Whether you are a hirer or a contractor, BOMAG TELEMATIC simplifies your billing processes. For example, in a joint venture actual costs become identifiable with BOMAG TELEMATIC.

The POWER version
gives you reports about standing time during operations which allows you to introduce targeted training for key personnel.

Your benefits:
■ Exact data
■ Precise billing in real time
Digital efficiency instead of a paper-based system.

Everything you need at a glance!

**BOMAG TELEMATIC and Service:**

See online when any machine requires a service. And check the current operating hours at any time. The system tells you when a service is due so you can plan service times, avoid unnecessary travel costs and utilise capacity in your workshop. Completed services are all documented.

**How does BOMAG TELEMATIC work?**

A specially developed robust module designed for use on site is installed securely onto the machine and receives the current GPS position and other data from the machine’s electronic system. This data is then transferred up to 150 times a day via mobile communications to a central server and prepared for display on the internet. Users can view data for their machines on any computer with internet access. Naturally, all data is password protected.
BOMAG TELEMATIC also works over national borders* with no additional costs. BOMAG TELEMATIC: everything you need in one package: hardware, data transfer and database. Data can also be transferred to office programmes.

Other manufacturers’ machines can be fitted with BOMAG TELEMATIC. Please ask your BOMAG Sales Partner!

BOMAG TELEMATIC

gives better utilisation of your fleet meaning your fixed costs are significantly reduced.
